

ANDROID FIELD RELEASE 1.0.12

Install. Register. Map. Grow.

A practical, step-by-step guide for farmers and CONSAI Strategic Partners using the Android field application.

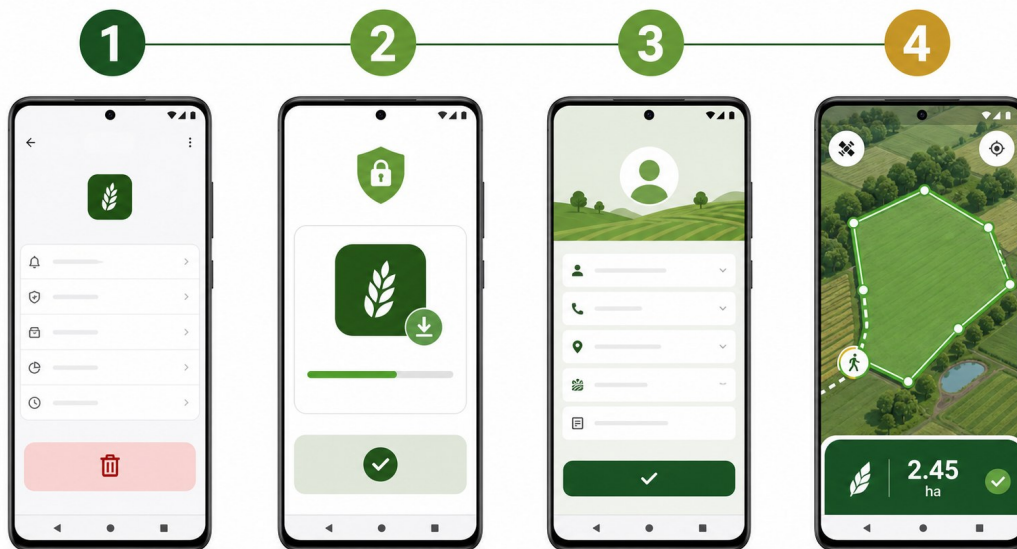

OFFICIAL RELEASE	Version 1.0.12 Build 13 Android field application
DOWNLOAD	consai-agrosystem.com/app-download/

Use only the official CONSAI download page. Never accept an APK from an unknown person, group or file-sharing site.

ACTION REQUIRED

Replace the previous app with 1.0.12

This release contains the updated field mapping experience and current public access links. Existing users of version 1.0.11 should complete a one-time clean replacement.

1

Uninstall the old app

Open **Settings** → **Apps** → **CONSAI Agro & Energy OS** → **Uninstall**. This is required once when Android cannot update the existing package directly.

2

Open the official download page

Use <https://consai-agrosystem.com/app-download/> and select **Download Android 1.0.12**.

3

Approve installation from your browser

If Android displays an installation warning, open the shown settings screen and temporarily allow installation from that browser. Return and continue. This warning exists because the app is installed directly, not from Google Play.

4

Install, open and sign in

Tap **Install**, then **Open**. Sign in with your existing CONSAI access. Do not create a second account if you already have one.

Important

Android may describe a directly downloaded APK as an unknown app. This does not mean the official CONSAI file is a virus. Confirm that the address begins with <https://consai-agrosystem.com/> before installing.

APP ORIENTATION

Know the five primary areas

The bottom navigation keeps the field workflow simple. Available actions can differ according to the user role and permissions assigned to the account.

TODAY	Start here for current tasks, farmer activity, reminders and operational status.
LEADS	Review relevant opportunities, prospect information and follow-up items available to the user role.
+ ACTION	Strategic Partners use the central action to register a farmer or begin a field action. Farmers see actions permitted for their account.
EARNINGS	Strategic Partners can review eligible commission activity. Registration by itself does not create a commission; revenue and approved commercial outcomes govern commissions.
ME	Manage profile information, account settings, help and sign-out. Keep the phone number, country and location details current.

Permissions

If a button is missing, first confirm the correct account and role. A Farmer account and a Strategic Partner account do not show the same dashboard. Contact CONSAI support if the assigned role is incorrect.

FOR FARMERS

Your first complete app session

Complete these steps with your Strategic Partner or CONSAI onboarding contact when possible.

1**Sign in**

Use the email or username and password supplied for your farmer account. Change temporary credentials when the system requests it.

2**Complete your profile**

Confirm full name, telephone number, country, province/region, city or village and preferred language.

3**Complete the farm snapshot**

Add the farm name, location, size, main crops or livestock, expected harvest period and products currently available.

4**Allow location access**

Select precise location while using the app. Switch on GPS and move into an open area before mapping.

5**Map the farm boundary**

Start mapping at the edge of the field and walk around the boundary safely. Keep the phone with you and avoid cutting across the field.

6**Finish and verify**

End mapping near the starting point. Review the boundary, calculated area, perimeter and recorded points. Save only when the shape matches the farm.

7**Use the ecosystem**

Review relevant opportunities, marketplace activity, Community collaboration and support information available to your role.

Safety first

Do not walk dangerous boundaries, water channels, steep slopes, roads or restricted land. Pause the mapping session and seek local assistance when necessary.

FOR STRATEGIC PARTNERS

Register and support a farmer correctly

A high-quality registration is complete, accurate, consent-based and linked to the correct partner hierarchy.

1

Confirm farmer consent

Explain why the information is collected, how the account will be used and which follow-up may occur. Never register a farmer without their knowledge.

2

Open the central registration action

Use the **+ action** and select farmer registration. If the action is absent, confirm that the logged-in account is an active Strategic Partner.

3

Enter verified identity and contact details

Use the farmer's own email where available. Confirm the international country code for the phone number and avoid duplicate records.

4

Record the farm snapshot

Capture farm name, region, locality, size, commodities, harvest timing and available products. Use accurate values rather than estimates where possible.

5

Submit and support account access

The farmer receives access information when a valid personal email is available. Where a managed system identity is used, follow the approved superior-partner access process.

6

Complete mapping and follow-up

Guide the farmer through GPS readiness, boundary walking and final verification. Help the farmer understand the area result and next actions.

Commercial rule

Farmer registration alone does not create revenue or commission. Partner earnings are tied to eligible, approved commercial outcomes shown in the platform.

FARM MAPPING

From GPS readiness to a verified boundary

The mapping screen now provides explicit progress states so the user knows whether GPS is ready, recording is active and the boundary has been completed.

1. PREPARE	Charge the phone, enable GPS, allow precise location and wait in an open area until the app reports acceptable accuracy.
2. START	Tap Start Mapping . Confirm the active recording state before walking. If no state appears, check location permission and GPS.
3. WALK	Walk the outer boundary at a steady pace. The route and recorded points should update as you move. Pause if you must leave the boundary.
4. END	Return close to the starting point and tap End Mapping . The app closes the polygon and calculates the result.
5. VERIFY	Check the visual boundary, hectares/acres, perimeter and point count. Repeat mapping if the shape is clearly incorrect.
6. SAVE / SYNC	Save the verified result. If the connection is weak, keep the session and sync when a stable network becomes available.

Accuracy guidance

Buildings, dense trees, valleys and poor satellite visibility can reduce GPS accuracy. Wait for a stable signal and repeat the session when the resulting shape or area is implausible.

TROUBLESHOOTING

Fast solutions in the field

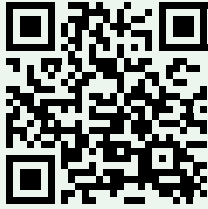

INSTALLATION BLOCKED	Verify the official URL, allow installation from the current browser in Android settings, return to the downloaded file and continue.
UPDATE WILL NOT INSTALL	Uninstall version 1.0.11 first, then install 1.0.12. Your online account data remains in the CONSAI system; do not delete the online account.
CANNOT SIGN IN	Check spelling, internet connection and the correct account email. Use the official password-reset path or contact support. Never send a password in a public group.
START / END IS INACTIVE	Confirm precise location permission, GPS on, acceptable accuracy and an active mapping state. Close and reopen the app after changing permissions.
MAP SHAPE IS WRONG	Do not save the session. Move to an open area, wait for GPS stability and repeat the boundary walk without shortcuts.
NO FARMER REGISTRATION BUTTON	Confirm that the user is signed in with an active Strategic Partner account. Farmer accounts do not receive the same registration controls.
WEAK OR NO INTERNET	Complete only actions that the app confirms can be stored offline. Reconnect and verify synchronization before assuming data reached the server.

Support information

Send the user name, role, phone model, Android version, app version, time of the issue and a screenshot to info@consaiagroos.com. Do not include passwords or protected identity documents in a normal support message.
